

Introduction Quobell

Quobell is a software house specializing in Oracle technology and from 1999 a continuously Certified and Gold Partner of Oracle.

Within the broad spectrum of all Oracle products Quobell has specialized in four areas:

- Application development
- Enterprise Content Management
- Enterprise portals
- Oracle Grid

Application development

Quobell consultants have an excellent knowledge of and experience in designing and implementing applications and / or customized standard software, including the Oracle eBusiness Suite.

From the past we use Oracle Designer / Developer; now Application Express (APEX) and JDeveloper / ADF offer the same features and more. Of course the consultants work with the latest insights and development methods like Agile, Lean and Scrum.

Enterprise Content Management

With *WebCenter Content* Oracle offers one of the most complete content management solutions. This allows your organisation to save paper. Options such as smart scanning, workflow, security, archiving, search options, auditing, etc. are obvious.

The Oracle Fusion Middleware and Database guarantee a solid, scalable and reliable solution, regardless of the number of documents. As *Specialized partner Oracle WebCenter Content* Quobell is the Oracle partner who can support a rapid implementation and further development, and help with integration with your existing (ERP) applications.

Oracle technologies:

- Oracle 10g/11g database
- Oracle WebLogic Server
- Oracle Designer, Headstart, Forms and Reports
- Oracle Fusion middleware, incl. SOA and Business Intelligence
- Oracle JDeveloper, ADF, Java
- Oracle Application Express
- Oracle WebCenter Portal
- Oracle WebCenter Content

Oracle applications:

- Oracle eBusiness Suite
- Oracle Fusion Apps

ORACLE® Gold Partner

Specialized
Oracle WebCenter Content

Enterprise portals

Internet, intranet and extranet are increasingly merging into enterprise portals which are used by internal employees, customers and suppliers, and offers them the possibility to communicate with each other. Self service, personalization and social media are essential options of these and similar portals. For this purpose Oracle offers *WebCenter Portal* and is using this in the new ERP line, Oracle Fusion Applications.

Quobell is one of the first partners in the Netherlands that specializes in Oracle WebCenter and is uniquely qualified to help you with a successful step by step implementation.

Oracle Grid

Not all IT organizations can or will use the public cloud. They are challenged to realize an internal cloud for all the in-use standard and customized applications, and for the interfaces between them. This cloud should usually be available 24/7, handle large data volumes, deliver high performance and security levels and should be scalable.

Oracle offers the most comprehensive platform to realize this and to keep it manageable. To design, implement and manage such architecture, Quobell has engaged highly specialized DBA and middleware consultants.

Specialized services

Quobell offers her services in the areas mentioned above in various ways:

- Detachment & resourcing
- Projects
- Maintenance & Management
- Products & Oracle licenses

Detachment & resourcing

Quobell detaches its own qualified, mostly certified professionals. When they are not available, we will quickly find the right candidate for you through our years of experience in selecting and matching ICT professionals.

Quobell distinguishes itself by focusing on a number of specific areas of expertise and by continuously focusing on more (knowledge) development of our employees and the quality of our service.

Projects

Quobell can execute complete projects, both at the client's residence and in house. Projects are possible on the basis of subsequent calculation, but executing (parts of) projects on a fixed price basis is also possible.

Maintenance & Management

With Quobell the complete management of your Oracle Databases and Middleware is in good hands. Keywords are security, reliability, availability and integrity of your data.

The maintenance and management of your Oracle-based information systems can be outsourced to us as well; regardless of whether a system is (partly) realized by Quobell itself.

Basic principle of this service is a clear, customized Service Level Agreement (SLA).

Products & Oracle licenses

Quobell also realizes information systems based on standard products, made by Quobell itself (like Q_Relation) or by third parties. Oracle has a large range of products that you can use in your application landscape and / or information architecture. As a Gold Partner of Oracle we have the knowledge and the overview to advise you what products actually add value and how you can buy these products the cheapest.

More information?

If you have any questions about our service, please do not hesitate to contact us. We will gladly inform you about the possibilities.
